Biomedical Instrumentation

Project

Biomedical Instrumentation

Generally, in Hospital Nurseries, nurses are taking care of abnormalities and the health of the newborn babies but they may not be available for taking care of the Infants 24x7. So, sometimes in the absence of care taker it may happens that health of the Infant becomes critical. Wireless technologies used by different Infant Monitoring Systems contain radiations that are highly harmful for the Infants. So, under these critical conditions, we have proposed an Automatic Wireless Li-Fi based Advanced Infant Monitoring System which continuously measures the intensive parameter of the child's health using wearable sensors, if any abnormal condition occurs, it will indicate a notification.

Selenium Automation

Validate news displayed in SharePoint BeCognizant.,
Get news details from BeCognizant
Validate associate details (News or Article written).
Validate hyperlinks, Validate share options.
•Handling alert, different browser windows, search option.
•Navigating back to home page.
•Extract multiple options items & store in collections
•Capture warning message
•Data Driven approach, Cross Browser Testing.

Selenium Automation

1. Search Doctors (any one speciality like Dentist, Cardiologist, etc) for any City (like Chennai, Bangalore, Pune, etc). Apply filters for Patient Stories, Experience, Fees, Availability and any one Sorting; Fetch & display the first 5 Doctor details
2. Go to "Surgeries". Extract & store all the surgeries in a List & display them in console output.
3. Under "For Corporate -> Health and Wellness Plan", fill the form with invalid email id & valid details for other fields, validate if "Taking a demo" button is disabled. Print the observation in console output. Then provide email in valid format & click the button and validate "Thank You" message is displayed
(Website: Practo.com).
